CONCEPTS ET MÉTHODES

L’Institut de la fourrure du Canada compile depuis 2010 des données sur le nombre et la valeur des fourrures provenant d’espèces d’animaux sauvages soit celles considérées comme « animaux à fourrure » par les diverses juridictions provinciales et territoriales de la faune au Canada.

Les données sont basées sur « l’année fourrure » qui s’échelonne entre le 1 juillet et le 30 juin de l’année suivante. Elles s’appliquent uniquement aux fourrures à l’état brut (non-tannées).

Les données sont fournies par les biologistes ou spécialistes de la gestion des animaux à fourrure de chaque province et territoire. Ils compilent leurs renseignements à partir de diverses sources. Pour la majorité d’entre eux, ils basent leurs calculs du nombre de fourrures sur les rapports que les trappeurs sont tenus de déclarer. Pour certaines régions, en plus du nombre de fourrures transigées, sont inclus le nombre de fourrures non commercialisables. Pour d’autres, les nombres sont basés à partir de rapports d’agents ou de permis d’exportation applicables à leurs territoires respectifs.

Les valeurs des fourrures sont respectivement établies pour chaque province ou territoire, par celles calculées à partir des ventes faites par les maisons de vente aux enchères (NAFA et Fur Harvesters). Pour quelques exceptions, elles peuvent être établies en consultation avec des experts locaux.

Elles sont affichées en dollars canadiens en valeur non-indexée.

L’exactitude des données est jugée élevée en raison de la qualité des sources de données. Des ajustements, quoique très rares, sont possibles et sont faits l’année suivante de l’année concernée.

CONCEPT AND METHODOLOGY

Since 2010, the Fur Institute of Canada has been compiling data on the number and value of furs derived from wildlife species that are considered “furbearers” by the various provincial and territorial wildlife jurisdictions in Canada.

The data are based on the “fur year” from July 1 to June 30 of the following year. They apply only to furs in the raw state (not tanned).

The data are provided by fur-bearing biologists or management specialists in each province and territory. They compile their information from a variety of sources. For the majority, they base their calculations of the number of furs on the reports that trappers are required to register. For some regions, in addition to the number of traded furs, the number of non-marketable furs is included. For others, numbers are based on agent reports or export permits applicable to their respective territories.

Fur values are determined for each province or territory, respectively, based on sales made by auction houses (NAFA and Fur Harvesters). For some exceptions, they may be established in consultation with local experts.

They are displayed in Canadian dollars at a non-indexed value.

The accuracy of the data is considered high due to the quality of the data sources. Adjustments, although very rare, are possible and are made the following year of the year concerned.
